

LLM-ERP Sales Demo One-Pager — 9 Killer Moments (v3.5)

For sales team: walk through these 9 moments in a 30-min demo = signed contract **Product status:** ~91% MVP, 193 tests green / 38 AI tools / 33 bilingual docs

For full Chinese version see [SALES_KILLER_MOMENTS_ZH.md](#) .

One-Liner Pitch

"Conversational ERP for 50-100 person factories — open Chrome, type one sentence to Chat, do CRUD on all documents; AI auto-migrates legacy data (Dingxin/Chenghang). \$30k/year."

Pain Points vs Our Answer

Customer says	We answer
"Too expensive (SAP \$200k+)"	\$30k/year all-in
"Too hard (100s of screens)"	Just talk to it, 2hr to learn
"IT can't use it"	AI asks back to teach
"Employee misclicks?"	ConfirmCard + 90s Undo
"What about legacy data?"	AI Schema Mapping, 1hr migration, zero downtime
"No mobile?"	Desktop is enough; 80% of time at the PC

9 Killer Moments

Moment 1 — Conversational read (warmup)

Boss: "How's the factory today?"
→ AI runs `preview_email_digest` tool → 3 sections (alerts/events/KPI)
★ "30 seconds, no asking employees" ★

Moment 2 — Conversational hard-write (CORE)

Procurement: "Order 100 M6 bolts from Changjiang, deliver 5/20"
→ AI auto-resolves Changjiang→SUP-001, "螺絲"→M6-BOLT-20 via glossary
→ Emits `ConfirmCard` with full details
→ Click confirm → PO created
★ "Don't learn the system, just talk" ★★

Moment 3 — Slot-filling reverse-ask

Procurement: "place an order"
→ AI: "I need 4 things: supplier, items, qty, delivery date. Please tell me each."
★ "AI never fabricates – asks for what's missing" ★

Moment 4 — Glossary smart resolution

Procurement uses old-timer nickname "鋼釘" (steel nail)
→ AI: `lookup_term` → M6-BOLT-20 (alias, confidence 0.9)
→ Order proceeds
★ "AI speaks veteran-worker language" ★

Moment 5 — 90-second Undo

Procurement (30s after order): "cancel my last order"
→ AI finds PO created in last 90s by this user
→ Emits reverse `ConfirmCard`, shows remaining 60s
→ Click confirm → `status=cancelled`
★ "Click wrong? Undo in 90 seconds" ★

Moment 6 — Cross-DB federated query

⚠ Recommended companion statement during demo: "This feature requires connecting to your incumbent ERP. We recommend first confirming the authorization scope in writing with your ERP vendor; specific licensing terms depend on your contract with that vendor, and add-on

licenses may be needed. erpilot does not participate in such contractual matters. See [EXTERNAL_DB_LICENSING_NOTICE_EN.md](#)."

```
Boss: "What's our Dingxin order amount for May?"
→ AI: list_external_connections → list_external_tables → query_external_db
→ "Dingxin: $3.2M (45 orders) + LLM-ERP: $580K (12) = $3.78M"
★ "Don't kill Dingxin, run both" ★ (provided customer has obtained written authorization)
```

Moment 7 — Schema Mapping + Migration (🏆 KILLER)

⚠️ **Same as above:** Access during a one-time migration still constitutes a use; we recommend the customer confirm authorization scope per their contract with the incumbent ERP vendor before proceeding. See [EXTERNAL_DB_LICENSING_NOTICE_EN.md](#) §FAQ Q8.

```
Procurement: "migrate all customers from Dingxin"
→ AI: preview_schema_mapping → suggests:
    CustNo → code (0.95)
    CustName → name (0.95)
    Grade → grade (1.0)
→ AI: migrate_from_external_with_confirm
    → ConfirmCard: 124 rows, 6 high-confidence mappings, skip on conflict
→ Click confirm → "✅ Imported 124 customers"
★★★ Customer signs on the spot ★★★
"My legacy data is saved, no IT, no consultants"
```

Moment 8 — Desktop Toast push

```
Boss leaves for a meeting, EventBus emits stock.below_safety + so.created
→ Desktop notification:
    🔔 ⚠️ Stock below safety: M6-BOLT-20 (300 / 500)
    🔔 📄 New SO-2026-018 $24,000
→ Chat top-right banner slides in (5s auto-dismiss)
★ "Don't watch the screen – AI notifies you" ★
```

Moment 9 — Daily Email digest

```
Boss: "Send daily digest to wang@example.com at 7am"
→ AI: preview → send_email_digest_with_confirm
→ ConfirmCard with recipient + content preview
→ Click confirm → "✅ Sent"
★ "Get factory status even at dinner" ★
```

Post-Sale Onboarding

Day	Activity
1	Docker one-click deploy + connect DB
2	Connect legacy (Dingxin/Chenghang/Excel) + Migration preview
3-4	RBAC roles + Glossary teach AI customer's nicknames
5	5 key staff 2-hour training
6-10	Parallel run (old + new)
11	Full cutover / old system read-only
12-14	Online support + tuning + glossary expansion

vs SAP 6-18 months: 95% reduction

Competitor Comparison

Competitor	Price	Mobile	AI	Legacy connect
SAP B1	\$200k+	Weak	None	DIY DI API
Chenghang	\$50-100k	Weak	None	Same as SAP
Dingxin Workflow	\$80-150k	Weak	None	Won't
Odoo	\$0-30k	Mid	Weak	Write module
Excel + LINE	\$0	Strong	None	None
LLM-ERP	\$30k	Desktop+Toast	38 tools built-in	AI Schema Mapping

30-Second Customer Close

"We're not yet another ERP. We're the AI overlay on top of ERP."

Employees don't learn the system — just talk to it. Your legacy system doesn't get killed — we read it + migrate gradually (*we recommend the customer first confirm authorization scope in*

writing with the incumbent ERP vendor). \$30k/year, 2-week deployment, 2-hour onboarding.

⚠ **Recommended reading for sales / consultants:** The above descriptions of "direct connection to incumbent ERPs (such as Workflow / ChengHang / SAP B1)" describe **technical feasibility**; specific authorization determinations should be based on the customer's contract with the relevant ERP vendor. See [EXTERNAL_DB_LICENSING_NOTICE_EN.md](#) for the compliance reminder, the recommended customer preparation steps, and erpilot's scope of role. **We recommend focusing on technical capability and advising the customer to confirm licensing with the incumbent ERP vendor; please do not make definitive statements about any third-party vendor's policies or audit practices.**

Want a trial? We can demo 30 min this Thursday afternoon.
