

Installation Guide (Owner Version)

Done in 3 minutes, no IT background required

You Only Do 3 Things

No typing, no configuration, no tech knowledge.

Time Estimate

Step	Time
Download/install Docker	5-10 min (first time)
Run installer script	3-5 min (automated)
Open browser & login	30 seconds
Total	~10 minutes

1 Install Docker (One-time)

Docker is like a "protective box" that contains LLM-ERP without affecting your other software.

Windows Users

1. Visit <https://www.docker.com/products/docker-desktop/>
2. Click "Download for Windows"
3. Double-click the downloaded `.exe`

4. Click Next through the installer
5. Restart your computer after install
6. Desktop will show a  Docker Desktop icon — double-click to open
7. When Docker Desktop window shows "Engine running" = ✓ Done

Mac Users

1. Visit <https://www.docker.com/products/docker-desktop/>
2. Click "Download for Mac" (choose Intel or Apple Silicon)
3. Double-click `.dmg`, drag Docker to Applications
4. Launch Docker (Spotlight search "Docker")
5. First run will ask permissions, click "Allow"

Linux Users

```
curl -fsSL https://get.docker.com | sudo sh
sudo systemctl start docker
sudo usermod -aG docker $USER && newgrp docker
```

💡 **Why Docker?** It lets LLM-ERP run inside a "virtual protective box" on your computer without messing with your Windows / Mac.

2 Run One-Click Installer

Windows

1. Extract the `opnetest` folder anywhere (e.g., `C:\LLM-ERP`)
2. Open the folder in File Explorer
3. Double-click `install.bat`
4. Window auto-runs:

```
[Step 1/5] Checking Docker ✓
[Step 2/5] Configuring environment ✓ (auto-generate JWT_SECRET)
[Step 3/5] Starting services (first run 2-5min)...
[Step 4/5] Waiting for backend ✓
[Step 5/5] Loading demo data ✓
```

5. After done, browser auto-opens to <http://localhost:5173>

Mac / Linux

```
cd LLM-ERP/opnetest
chmod +x install.sh
./install.sh
```

→ Same 5 steps, browser auto-opens.

3 Login

When the browser opens, you'll see a gradient blue login screen:

Username	Password
admin	admin123

Top-right  switches between English / 繁體中文 anytime.

First login shows immediately:

- ✓ 4 key metrics (Revenue / WOs / POs / Stock Alerts)
- ✓ AI Summary (one sentence telling you today's highlight)
- ✓ Red alert: "M6 Bolt below safety stock" (this is demo data)

4 Load Your Industry's Demo Data (Optional)

We prepared 5 typical industry samples:

Your Industry	Command
Metal Machining (CNC bolts)	<code>./load_industry.sh metal</code>
Plastic Injection	<code>./load_industry.sh plastic</code>
PCB Electronics Assembly	<code>./load_industry.sh pcb</code>
Food Processing/Bakery	<code>./load_industry.sh food</code>
Textile Dyeing	<code>./load_industry.sh textile</code>
Load all	<code>./load_industry.sh all</code>

Each industry includes:

- 8-12 typical parts (with EN/ZH names)
- 2-3 finished products + BOM
- 4-5 industry-standard suppliers
- 4-5 typical customers

Windows users run in cmd:

```
docker compose exec backend python -m scripts.seed_industries metal
```

5 Set Up AI Assistant (Optional)

If you want the AI to actually answer questions (not just show "demo mode"), set an LLM API Key.

Steps

1. Open `backend\.env` (Windows) or `backend/.env` (Mac/Linux) in any text editor
2. Find:

```
LLM_PROVIDER=deepseek
LLM_MODEL=deepseek-chat
LLM_API_KEY=
```

3. Fill your key after `LLM_API_KEY=`
4. Save
5. Restart: `docker compose restart backend`

Get an API Key (5 minutes)

Recommended	URL	Notes
DeepSeek (cheapest)	https://platform.deepseek.com	Best for Chinese, \$5 free credit
OpenAI	https://platform.openai.com/api-keys	Industry standard
Anthropic Claude	https://console.anthropic.com	Highest quality
Ollama (zero cost, local)	https://ollama.com	No API key, no data leak

💡 Skip this entirely is OK! All 11 other pages work fine. Only the AI chat shows a "demo mode" message.

? FAQ

Q1: Can a non-technical person really install it?

Yes. The whole process:

1. Download Docker (just click Next)
2. Double-click one file
3. Browser opens, login

No command typing required.

Q2: Cost?

Item	Cost
LLM-ERP software	Free (open-source)
Docker	Free
Running on your computer	Free (just electricity)
LLM API (optional)	DeepSeek ~NT\$ 300-1000/month
Total (without LLM API)	NT\$ 0
Total (with LLM API)	NT\$ 300-1000/month

Q3: Can I skip Docker?

You can but it's harder. Docker is the key to "install without tech knowledge". If you're technical, see [ADMIN_GUIDE.md](#) for native Python + Node setup.

Q4: Can I view on mobile?

Yes! Open your phone browser to `http://YOUR-COMPUTER-IP:5173` :

- Find your computer's IP:
 - Windows: `ipconfig` → IPv4 Address
 - Mac/Linux: `ifconfig | grep inet`

- Then on phone browser: `http://192.168.1.X:5173` (replace with your IP)

Mobile layout is optimized, fully responsive.

 Native Mobile App in Phase 1 roadmap (Expo). Currently use responsive browser version.

Q5: How do I stop / restart?

Action	Command
Stop	<code>docker compose down</code>
Restart	<code>docker compose restart</code>
Full reset	<code>docker compose down -v && ./install.sh</code>
View logs	<code>docker compose logs -f backend</code>

Q6: How to upgrade?

```
git pull          # Get latest (or download new zip)
docker compose up -d --build
```

Your existing data is preserved.

Q7: Installation failed, what to do?

Case 1: "Docker not found" → Docker not installed, back to Step **1**

Case 2: "Backend timeout" → First build is slower, may take 5+ minutes. Be patient. → Detail: `docker compose logs backend`

Case 3: "Port 8000 already in use" → Another program uses the port. Edit `docker-compose.yml`, change `8000:8000` to `8888:8000`.

Case 4: Other → Screenshot `docker compose logs backend` and contact support.

Emergency

Problem	Solution
Won't run at all	Contact LINE support
Want to fully remove	<code>docker compose down -v && rm -rf opnetest</code>
Move to new computer	Copy entire <code>opnetest</code> folder, run <code>install.sh</code>
Backup data	<code>docker compose exec backend cp /app/erp.db /tmp/backup.db</code>

Signs of Successful Install

Open <http://localhost:5173>, you should see:

1. Gradient blue login screen
2. Top-right EN/ZH language toggle
3. Demo Mode entry (yellow button)
4. System version v2.0.0
5. Bottom green LLM provider indicator

After login:

1. AI Summary showing " 1 item below safety stock" (demo)
2. 4 beautiful stat cards
3. WO progress bar animations
4. Red stock alert list

See these → Congrats, system 100% running!

Want PDF Manuals?

We package all customer-facing manuals as polished PDFs (bilingual ZH+EN, A4-formatted, print/email ready):

#	Content	Audience
01	Installation Guide (this doc) ZH + EN	Owner/secretary
02	Quick Start (single bilingual)	Everyone
03	User Manual ZH + EN	Sales/foreman/buyer
04	Mobile App Guide (single bilingual)	Mobile users
05	Network Deployment ZH + EN	IT/integrator
06	System Architecture & Topology ZH + EN	IT/architect
07	LLM Benchmark Report ZH + EN	Decision maker

Build it (requires Node.js 18+):

- Windows: double-click `build_pdfs.bat`
- Mac/Linux: `./build_pdfs.sh`

Output: `docs/pdf/` (12 PDFs; first run ~3 min to download deps, later ~1 min)

See: `scripts/build-pdfs/README.md`
