

Tax / Accounting / Approval Module Legal & Compliance Notice (v3.34)

Nature of this document: Compliance reminder for tax / financial reporting / approvals. **Does NOT constitute tax, accounting, or legal advice.** Applies cumulatively with all §6 disclaimers from v3.25.10 → v3.34.

中文版: [TAX_ACCOUNTING_LEGAL_NOTICE_ZH.md](#)

Important: Tax / Financial Reporting is High-Compliance Sensitive Domain

Ouvoca v3.34's new LLM tools involve:

- eInvoice issuance / voiding (affects business tax filing)
- Payment / receipt recording (affects cash flow, financial reporting)
- AR / AP queries (decision basis)
- Multi-step approval (affects contractual validity)

Errors in these operations **may trigger**:

-  Tax audit (revenue authority investigation)
-  Financial misstatement (CPA signoff liability)
-  Contractual disputes (with customers / suppliers)
-  Internal control violations (SOX / ISO / GMP certification revocation)

Please follow this guide and have CPA / tax advisor / legal counsel review major operations.

1. eInvoice (issue / void)

1.1 issue_einvoice_with_confirm

Risk	Customer Responsibility
Tax ID error	Must use <code>validate_tax_id_tool</code> to verify before issuance; incorrect B2B invoice cannot be deducted by buyer
Amount error	Erroneous amounts are included in current filing; corrections require credit note
Upload to revenue authority	Ouvoca does NOT directly upload; customer must integrate cloud-invoice platform / tracking-code management API
Tracking code allocation	Ouvoca does NOT manage tracking codes; follow your company's revenue-authority allocation rules

1.2 void_einvoice_with_confirm

Risk	Customer Responsibility
24-hour limit	Voiding possible within 24 hours of issuance; after that, use credit note workflow
Cloud notification	Voiding must be reported to revenue authority / cloud invoice platform; Ouvoca's ConfirmCard only marks internal status
Already-deducted scenario	If buyer has filed for deduction, voiding may cause complex reconciliation; coordinate with buyer beforehand

1.3 validate_tax_id_tool

Limitation	Description
Format + checksum only	Algorithm follows Taiwan revenue authority public rules; does NOT verify name correspondence (e.g., "is 12345678 actually 'XX Company'?")
No status check	Does not verify if company is closed / suspended
TW only	US / China / EU VAT/EIN validation not implemented; for other countries use that country's official validator

1.4 query_monthly_sales_tax

Risk	Description
NOT Form 401	This tool estimates from SO data; NOT directly usable as filing basis
Missing items	Excludes input tax, zero-rated, tax-exempt sales, returns/allowances
Books vs filing	This tool reads SO records; filing requires issued-but-unrecorded and recorded-but-unissued adjustments
CPA review mandatory	Before filing, must be reviewed by CPA / bookkeeping firm

2. Payment / Receipt

2.1 Record Payment to Supplier

Operation	Impact
<code>record_payment_to_supplier_with_confirm</code>	Creates draft JE : debit AP, credit bank
Followup	Must be posted by accountant via <code>post_journal_entry_with_confirm</code> to take effect

Critical warnings:

- Ouvoca's JE is **draft**; **not posted** = **no financial-statement impact**
- After posting, **locked**; requires reversal voucher to undo
- For major amounts (e.g., > 5% of annual revenue), use **maker-checker**
- Reconciliation with supplier statements is separate; Ouvoca does NOT replace reconciliation

2.2 Record Customer Receipt

Risk	Customer Responsibility
Receipt date vs invoice date	Ouvoca uses creation timestamp; tax recognition timing may differ
Partial receipts	No "installment receipt" model; manually handle half-payments
Refunds	No one-click LLM refund; use JE reversal + bank operations

2.3 AR / AP Queries

Tool	Limitation
<code>query_outstanding_ar</code>	Based on <code>AccountsReceivable</code> table with status=open/partial; may miss credit sales without AR records
<code>query_outstanding_ap</code>	Estimated from PO with status=received/partial_received; may miss direct expenses, payroll, taxes

Important:

- Amounts are **advisory, not official financial statements**
- Before month-end close, CPA must reconcile

3. Multi-Step Approval

3.1 Approve / Reject Legal Effect

`approve_request_with_confirm` 's legal significance:

- Approver's `employee_id` written to ApprovalStep, **forming audit trail**
- If approval later deemed **negligent** (e.g., approving over-budget purchase), liability rests with that employee / supervisor
- Ouvoca's audit log can serve as **internal audit basis**, but **external legal litigation** still requires formal documentation

3.2 Reject Requires Reason

`reject_request_with_confirm` enforces non-empty comment:

- **Equal treatment principle** for legal / internal control compliance
- Employee's **basis for appealing** rejected proposals
- For future disputes, reasons can be traced

3.3 LLM Slot Extraction Risk

When user says "approve that PO," LLM may:

- Match a different PO's approval request
- Return without completing all steps (multi-step scenario)

ConfirmCard is the defense: users must review request_id specifics (entity_type + amount + initiator) before confirming.

4. Warehouse Picking

4.1 Create Pick Task

`create_pick_task_with_confirm` risks:

- Creates one PickTask **per SO item** (may be excessive)
- Does **NOT** check inventory sufficiency (shortage discovered at picking)
- Assigned operator without permission causes picking to stall

Recommendation: combine with `query_inventory` to pre-verify stock.

5. Quality NCR / CAPA

5.1 NCR Legal Nature

Records created by `create_ncr_with_confirm` :

- **Do NOT** constitute a claim against supplier (separate written notice required)
- **Do NOT** constitute disciplinary basis against employee (per labor law + internal rules)
- **Do NOT** constitute customer recall notice (legal + PR judgment required)

5.2 CAPA Compliance Status

`create_capa_with_confirm` records can serve as:

- Corrective action tracking for **ISO 9001 / GMP / IATF 16949** etc. quality management systems
- Evidence in **customer audits**

But do **NOT** constitute:

- Basis for insurance claims (independent assessment report required)
- Notification to regulatory authorities for recalls (follow each country's regulatory procedures)

6. Disclaimer Clause

To the maximum extent permitted by applicable law, Ouvoca assumes **no liability** for:

Tax

1. Tax penalties from LLM mis-extracting SO number / tax ID causing wrong invoice issuance
2. Business tax filing irregularities from voiding past 24-hour window / missed voiding

3. Tax evasion risk from misusing `query_monthly_sales_tax` data as filing basis
4. Buyer deduction disputes from missing tax ID validation (e.g., closed companies)

Accounting

5. Financial misstatement from LLM-created draft JE posted incorrectly
6. Cash flow misjudgment from AR/AP query omissions
7. Reconciliation mismatches from incorrect payment / receipt records

Approval

8. Contractual disputes from LLM mis-extracting request_id causing wrong approval
9. Internal control failures from ConfirmCard mis-click / inattentive review

Warehouse / Quality

10. Shipping delays from incorrect pick task creation
11. Quality certification revocation from incomplete NCR / CAPA records

Third Parties

12. Any disputes by third parties (customers, suppliers, employees, tax authorities, insurance companies, certification bodies) acting on this system

7. Cumulative Applicability of Predecessor Disclaimers

This version overlays v3.25.10 → v3.33. All predecessors' §6 disclaimers apply cumulatively:

Predecessor	Key cumulative point
v3.25.10 §6	MRP is planning advisory; deterministic
v3.26 §6	CLSP NP-hard heuristic
v3.27 §6	Provenance ≠ legal causation; TOC heuristic
v3.28 §6	TA ≠ GAAP/IFRS; antitrust warning
v3.29 §6	Forecast not guarantee; unforeseen events
v3.30 §6	LLM slot extraction risk
v3.31 §6	hard-write 5 customer responsibility points
v3.32 §6	Quotation / Count / PO-SO modification contract warnings
v3.33 §6	Inventory-sales deepening contract warnings
v3.34 (this doc)	Tax / FR / Approval high-compliance warning (not tax / accounting / legal advice)

8. Recommended Practice

Tax

- **Mandatory** `validate_tax_id_tool` before issuing invoices
- By 5th of each month, have **CPA / bookkeeping firm** reconcile Ouvoca estimates against actual Form 401
- Major invoices (e.g., > NT\$1M) use **dual-issuance + supervisor review**
- Cloud invoice upload integrated by IT (Ouvoca's mock does NOT replace)

Accounting

- Major payments / receipts (e.g., > 5% of annual revenue) **must** use maker-checker (creator ≠ poster)
- Month-end / quarter-end / year-end **mandatory** CPA reconciliation
- External financial reports follow **GAAP / IFRS** standards; Ouvoca's internal analysis NOT a substitute

Approval

- Approve / reject **legal evidence strength** limited; major decisions retain written + signature

- Rejection comment should be **specific** (not just "disagree"), facilitating future dispute tracing

Quality

- NCR / CAPA records for **internal QMS use**; external (insurance, recall) requires independent process
- Before certification audit, have QA supervisor review NCR / CAPA completeness

9. Cultural Reminder: LLM Does NOT Replace Professionals

Ouvoca's promise: "natural language replaces training", NOT "replaces CPA / tax advisor / legal counsel."

AI Can	Professional Judgment Still Required
Quickly issue invoices (per input)	Filing strategy / tax planning
Integrate AR/AP data	Month-end close / financial reporting
Recommend approve / reject	Major contracts / legal disputes
Create NCR / CAPA	External recall / insurance claims

Final decisions should rest with:

- Sales / Procurement / Warehouse / Plant Manager / QA — per their expertise
- Accountant / CPA — per their expertise
- Supervisor / Legal / Tax Advisor — per their authority
- Owner — per their role

Together.
