

Third-Round Beginner-Fix Legal & Compliance Notice (v3.39)

Document nature: Compliance reminder for LOGO upload, delete trio, batch print, pagination, digest trigger, slot-filling 3-strike fallback, auto-start. **Does not constitute legal advice.** Cumulatively applies to all §6 disclaimers in v3.25.10 → v3.38.

Chinese version: [POLISH_V339_LEGAL_NOTICE_ZH.md](#)

Important: v3.39 fixes 8 issues found after v3.38 audit

v3.39 covers:

- **PDF company LOGO (K1)** — uploaded image embedded in all outbound PDFs
- **Delete customer / supplier / part (K2)** — irreversible, with pre-checks
- **Batch print ZIP (K7)** — up to 50 PDFs packaged for download
- **LLM tool pagination (K3)** — handle 1000+ records without context blowup
- **Manual daily digest trigger (K6)** — scheduling delegated to OS cron / Task Scheduler
- **Slot-filling 3-strike fallback (K4)** — 3 consecutive failures route to form page
- **Backend offline guidance (K5)** — Login shows "open Docker Desktop"
- **Docker container auto-start (K8)** — `restart: unless-stopped` on all services

1. PDF LOGO Embedding (K1)

1.1 Copyright Boundary

- Customer-uploaded LOGO must be **owned by the company**
- Using **third-party LOGOs** (brand marks, designer work without license) may violate Copyright Act §91
- Ouvoca does **not** verify LOGO copyright ownership

1.2 Display Limits

- LOGO max 4cm × 1.5cm (keep PDF clean)
- File ≤ 500 KB (avoid bloated PDFs)
- Only PNG / JPG (image/* MIME)

1.3 Outbound PDF Legal Effect

- LOGO appears at the top of Quotations / POs / SOs / Delivery Notes
 - Once sent, third parties may recognize the PDF as your company's official document
 - Customer should establish internal control: **only authorized LOGOs may be uploaded**
-

2. Delete Customer / Supplier / Part (K2)

2.1 Irreversible + Pre-checks

Deletion is **permanent**. v3.38's `undo_last_admin_change` does **not** cover deletes.

Pre-checks:

- **Customer**: any SalesOrder → blocked (use `is_active=false`)
- **Supplier**: any PurchaseOrder → blocked
- **Part**: any BOMItem / PurchaseOrderItem / InventoryTransaction → blocked

2.2 ConfirmCard TTL 10 min

- Delete operations get a shorter 10-min thinking window (vs. 30-min default), **forcing in-moment decision**
- After expiry, re-invoke the tool

2.3 Statutory Retention Obligations

Before delete, confirm:

- Business Accounting Act §38: transaction vouchers must be kept 5 years — orders related to a customer/supplier **must not be deleted with the master**
- PDPA: customer PII used during contract performance **must not be arbitrarily deleted**
- For "right to be forgotten" (GDPR-equivalent) — use **anonymization** instead of delete

2.4 Ouvoca Responsibility

- Ouvoca pre-checks **business associations** and blocks dangerous deletes
 - Ouvoca does **not** check **legal retention periods** or **contractual obligations**
 - Customer must self-verify **legal permission** before executing
-

3. Batch Print ZIP (K7)

3.1 Limits

- Max 50 PDFs per batch (avoid backend OOM)
- Supports SO / PO / Quotation only
- Failed nos. listed in `failed_list`

3.2 ZIP Custody

- ZIP contains **complete outbound PDFs** (same as v3.36 §2)
 - Customer should encrypt at rest, not leak
 - Delete local ZIP file promptly after printing
-

4. LLM Tool Pagination (K3)

4.1 Design

- `list_customers_paginated` accepts `page` + `page_size` (max 50)
- Returns `total` / `total_pages` / `items`
- Suggests "next page" in natural language

4.2 Risk

- Pagination may be chained into **complete data download** (call all pages)
 - Customer should monitor abnormal download patterns at enterprise SSO / API gateway layer
-

5. Daily Digest Trigger (K6)

5.1 Scheduling

- v3.39 provides manual trigger: `trigger_daily_digest_now`
- Automated scheduling delegated to OS cron / Windows Task Scheduler / docker-compose-restart
- Example (Linux): `0 8 * * * curl -X POST http://localhost:8000/api/email-digest/send -H "Authorization: Bearer $TOKEN"`

5.2 Email Legal Boundary

- Email contains **business data** (KPIs / receivables / pending approvals)
- Customer must **verify recipient** is authorized personnel (not personal email)

- Sending should have **audit log** (v3.x roadmap)
-

6. Slot-filling 3-Strike Fallback (K4)

6.1 Behavior

3 consecutive missing-slot failures on the same tool → system returns `retry_exceeded=true` + suggestion "use form page".

6.2 Limits

- Counter is **in-memory** (cleared on backend restart)
- Isolated per user × per tool (failure on A doesn't affect B)
- Auto-reset on successful completion

6.3 Customer Responsibility

- If 3 retries still fail, **LLM response quality may degrade** → review question clarity
 - Multiple failures may reflect **model bias** or **training gap** → customer can report to Ouvoca
-

7. Backend Offline Guidance (K5)

7.1 Message Content

When Login can't reach backend, show:

- "Is Docker Desktop running?"
- "Run `docker compose ps` to check containers"
- "Firewall blocking port 8000?"

7.2 Disclaimer

- Guidance is a **general checklist**
 - Customer's **specific environment** (corp firewall / VPN / proxy) requires IT
 - Ouvoca does **not** remotely diagnose customer's network issues
-

8. Docker Container Auto-Start (K8)

8.1 Configuration

`docker-compose.yml` adds `restart: unless-stopped` to all services:

- Ouvoca containers auto-start when Docker starts
- Containers auto-restart on crash (unless explicitly `docker compose stop`)

8.2 Companion Requirement

- Customer must **enable Docker Desktop "Start when log in"**
- Ouvoca does **not** register as a Windows Service (to avoid conflict with Docker Desktop)
- After OS reboot: launch Docker Desktop → Ouvoca auto-follows

8.3 Risk

- Auto-restart may **mask** true crash root cause (logs in `docker compose logs backend`)
- Customer IT should **periodically review** logs (v3.x roadmap: log rotation)

9. Disclaimer (Cumulative v3.25.10 → v3.39)

To the maximum extent permitted by applicable law:

1. **LOGO Upload** Ouvoca does **not** verify the **copyright ownership** of uploaded LOGOs; customer must **self-verify** legal use rights; Ouvoca is **not liable** for copyright infringement disputes.
2. **Delete Trio** Ouvoca pre-checks business associations; customer must **self-verify** statutory retention, contractual obligations, GDPR / PDPA compliance; Ouvoca is **not liable** for irreversible data loss, contract disputes, or audit failures.
3. **Batch Print ZIP** contains complete trade secrets; customer must safeguard; Ouvoca is **not liable** for ZIP leakage disputes.
4. **Pagination** Pagination does **not** replace formal data-export compliance flow; customer must monitor abnormal downloads at SSO / Gateway layer.
5. **Daily Digest** Manual trigger is a **convenience**; automated **scheduling, sending, recipient control** is customer-configured; Ouvoca is **not liable** for mis-send / miss / wrong recipient.
6. **Slot-filling 3-Strike** 3-retry is a **heuristic suggestion**; does **not** replace full conversation-quality review; customer should adjust based on real UX.
7. **Backend Offline Guidance** General checklist only; Ouvoca is **not** responsible for resolving customer's network / firewall / VPN issues.

8. **Docker Auto-Start** Via `restart: unless-stopped`; customer must **co-configure** Docker Desktop auto-start; Ouvoca does **not** register as Windows Service.

10. Pre-Adoption Checklist (v3.39 reinforced)

10.1 LOGO Use

- ☐ LOGO is **owned** by the company (or licensed)
- ☐ LOGO scaled to 4cm × 1.5cm and clearly readable
- ☐ Test-printed a PDF to confirm LOGO display

10.2 Deletion Policy

- ☐ Established **internal control flow** for data deletion (who can delete, who must sign off)
- ☐ Confirmed **statutory retention period** has passed, safe to delete
- ☐ Trained employees: **customers with orders cannot be deleted**, use "deactivate" instead

10.3 Batch Print

- ☐ **Delete local ZIP** promptly after printing
- ☐ Batch print audit log enabled (for "who printed what" later)

10.4 Auto-Start

- ☐ Docker Desktop "Start when log in" enabled
- ☐ Tested "reboot → Ouvoca auto-available" flow

10.5 Cumulative with Existing Checklists

- ☐ Completed **all** v3.25.10 → v3.38 checklists

Version: v3.39 (2026-05-21) **Author:** Ouvoca Legal Team (internal) **Corresponds to code:**

- `backend/app/agents/domains/polish_v339_tools.py` (7 LLM tools)
- `backend/app/services/print_service.py` (LOGO rendering)
- `backend/app/agents/engine.py` (slot-filling 3-strike fallback)
- `frontend-desktop/src/pages/Login.tsx` (backend offline guidance)
- `docker-compose.yml` (restart: unless-stopped)
- `install.bat` (K8 Docker auto-start guide)
