

Project Rename Notice — erpilot → Ouvoca

Effective Date: 2026-05-22 Old Name: erpilot New Name: Ouvoca New Repository: <https://github.com/fanchanyu/ouvoca>

中文版本: [RENAME_NOTICE_ZH.md](#)

To Past Readers, Contributors, and Prospective Customers

This project was originally published on GitHub under the name "erpilot". After due diligence, we have discovered that the name "erpilot / ERPilot" has been **previously registered or used by multiple organizations** in the ERP / SaaS / consulting service industry, including but not limited to:

- ERPilot LLC (USA) — business entity / trademark application records
- ERPilot.in (India) — ERP consulting service
- Other ERP / consulting service organizations with similar spelling (ER Pilot / e-RPilot etc.)

To **respect the rights of existing trademark holders** and avoid market confusion, trademark disputes, or legal entanglements, this project has been officially renamed to "**Ouvoca**" effective 2026-05-22.

Our Position and Commitments

1. ❌ We **do not assert** any trademark rights over the wording "erpilot / ERPilot"
2. ❌ We **do not imply** any commercial, technical, or legal affiliation with the aforementioned organizations
3. ✅ We acknowledge our **failure in thorough trademark search** of prior users, and hereby apologize
4. ✅ Before the rename, we verified the originality of "Ouvoca" through **4 channels**:
 - USPTO / TIPO trademark database search (no conflicts found)
 - Domain WHOIS lookup (ouvoca.com / ouvoca.ai both unregistered)
 - GitHub handle search (no user squatting)
 - Google / company database comprehensive search (no significant competing brand)

📌 Proactive Clarification on Similarly-Spelled Brands

Similar Brand	Domain	Differentiation from Ouvoca
Avoca AI (avoca.ai, 2026)	NYC AI voice agent for trades (plumbers, electricians)	Different domain (voice booking system) + different ICP (blue-collar trades vs SMB manufacturing ERP) + different initial letter (A vs O)
Ouva (SF, healthcare AI)	Healthcare AI	Different domain + different spelling
Ouvéa (French Pacific island)	Geographic name	Not a commercial brand

Ouvoca's **core positioning**: "Conversational AI-Native ERP for SMB Manufacturers" / "Desktop conversational ERP for 50-100 person factories" — **zero overlap** in domain or ICP with any of the above.

| Specific Impact on Existing Users

👤 For Developers Who Previously Cloned / Starred / Forked

- Repository URL changed: `github.com/fanchanyu/erpilot` → `github.com/fanchanyu/ouvoca`
- GitHub auto-redirect: Old URL still works in the short term, but we **strongly recommend** updating your local git remote:

```
git remote set-url origin https://github.com/fanchanyu/ouvoca.git
```

- Issue / PR links: GitHub automatically migrates existing IDs (recommend updating bookmarks)
- Docker image tags: Will change to `ouvoca/backend` / `ouvoca/frontend` in next release

📁 Regarding Existing Commit History

- Git history **retains** the "erpilot" string in commit messages / file contents from before 2026-05-22
 - Reason**: Force-rewriting history (git filter-branch / BFG) would break all existing commit hashes, affecting any forks / clones / mirrors
 - Policy**: Use the rename commit as the **dividing line in time**; all forward content is Ouvoca
- For clean history needs, you can squash / branch off after the rename commit

For Prospective Customers / Procurement Evaluators

-  **PDF customer documents** (72 bilingual) have all been rebuilt with Ouvoca branding
-  **API descriptions / UI strings / Tagline:** "Ouvoca — Conversational AI-Native ERP for SMB Manufacturers"
-  **Legal documents:** CLA / LICENSE-COMMERCIAL / LICENSE-SMALL-BUSINESS all synchronized
-  **Existing business contact channels:** Unchanged, still via GitHub Issue (label `legal/cla`)

For Existing Deployments

Impact Item	Description
Docker container names	<code>erpilot-*</code> still works (backward compatible); new deployments should use <code>ouvoca-*</code>
Environment variables	All retain original names (no <code>ERPILOT_*</code> prefixed vars), zero migration cost
Database schema	Completely unchanged
API endpoint paths	Completely unchanged (no <code>/api/erpilot/*</code> paths)
Configuration file locations	Unchanged

Apology Statement

We sincerely apologize for the following inconveniences caused by this rename:

1. **Any name confusion concerns** caused for existing "erpilot / ERPilot" trademark holders — Our oversight in not completing trademark due diligence at project inception.
2. **URL changes / bookmark invalidation / documentation updates** required of readers / contributors / customers — We will maintain the rename notice prominently in README and complete all external reference update requests by end of 2026.
3. **Inability to notify** community references in blog posts / tutorial videos / third-party documentation in a timely manner — We cannot individually notify all, but welcome citers to obtain this official statement via GitHub Issue for use in correcting articles.

Our Commitments

Commitment	Action
Future naming	Any new branch / derivative product will undergo prior multi-channel trademark search (USPTO / TIPO / WIPO / domain / GitHub)
Transparency	If existing erpilot / ERPilot rights holders wish to communicate, please contact via GitHub Issue; reply within 7 business days
Legal compliance	Complete USPTO trademark application for Ouvoca in Q3 2026 (class 9 + 42)
Existing documents	All historical legal notices from v3.37-v3.43 (72 bilingual PDFs) have been fully rebuilt as Ouvoca versions

Public Apology to Existing ERPilot Rights Holders

If this notice is the first you've heard of this project — being "ERPilot LLC", "ERPilot.in", or another existing erpilot / ERPilot trademark / company name rights holder — we hereby **formally apologize**:

We deeply regret that this project, prior to 2026-05-22, was publicly distributed on GitHub under the name "erpilot", which may have caused **brand confusion, market confusion, or goodwill impact** for your company.

As of 2026-05-22, this project has **completely ceased** using the name "erpilot" and completed project-wide renaming to "**Ouvoca**". If you believe there are still matters requiring negotiation or remediation (such as requesting git history cleanup, specific commit removal, or other remedial measures), please contact the maintainer directly via **GitHub Issue or the contact methods in this project's README**. We commit to **responding within 7 business days** and entering good-faith negotiation.

Legal Statement

1. This notice does **not constitute** any waiver, assignment, or admission of trademark infringement
2. The project maintainer **acknowledges past use** of the wording "erpilot" and **immediately ceased** such use upon discovering the conflict, completing this rename
3. As of the rename effective date (2026-05-22), this project seeks trademark protection **under the name "Ouvoca"** under applicable law

4. To the maximum extent permitted by applicable law, the maintainer will negotiate any **third-party disputes** arising from "erpilot" name usage prior to 2026-05-22 in good faith, not actively assuming compensation obligations beyond legally mandatory liability
-

Rename **Effective** **Date:** 2026-05-22 **Corresponding** **Commit:**
f8be4068230a66b0c2008669c079de12e0c135cf **New Repository:** <https://github.com/fanchanyu/ouvoca>
New Primary Brand: Ouvoca **New Tagline:** "Ouvoca — Conversational AI-Native ERP for SMB Manufacturers" / 「對話式 AI-Native ERP · 給 50-100 人小型製造業」
Maintainer: Ouvoca Project Team
